25X1X

- 25X1C
1. Experimental tubes now in the HF-Werk, at Berlin-Oberschönewalde.
 2. These tubes were originally given production priority, but are not yet in a state for production so that they have been sent back again for research. There are shortages of needed materials. They will be included in the production plan for 1953.
 3. The plant at present is producing about 1,000 television tubes per day.
 4. The material difficulties which at times forces suspension of the assembly division appear to have been overcome. Currently there are shortages of mica and anodes. The percentage of rejections in the filter winding division has risen considerably.
 5. The tube is still in the developmental stage and is not yet ready for production. It has only one grid, is 4.3 mm wide from strut to strut, 1.22 mm high, and 9.4 mm in radius.
